

Abstract of the Disclosure

1
2 The invention provides an improved method and system for interactive
3 broadcast and web information browsing. In embodiments of the invention,
4 web information is presented in conjunction with a broadcast television
5 image, either at an edge of the image screen or overlaid with the image
6 screen in an opaque, transparent or translucent image. The presented web
7 information is fully interactive and can be interacted with by the user using
8 all known features of interactive web presentation.
